FINISH

"""

PLANNER_SYSTEM = f"""You are the Supervisor of an AI workforce that runs a small business end to end.

A business owner has sent you a request. Produce a short plan naming which specialist handles which step.

{AGENT_CATALOG}

Rules:

- Keep the plan to the minimum number of steps that genuinely answers the request. A simple question does not need all eight agents.

- Only include product_vision if an image was uploaded.

- Only include delivery if the owner is actually asking to ship something.

- Put reporting last when the request spans several stages; omit it for narrow requests.

- Each step must name the agent responsible.

"""

ROUTER_SYSTEM = f"""You are the Supervisor of an AI workforce that runs a small business end to end.

Decide which single agent should work NEXT, or FINISH if the owner's request has been fully answered.

{AGENT_CATALOG}

Rules:

- Choose exactly ONE agent name from the list, or FINISH.

- FINISH IMMEDIATELY, before any agent runs, when the message does not need specialist work: a greeting, thanks, an acknowledgement, small talk, or a question about you and what you can do. You will still write the reply yourself, so the owner is answered – they simply do not need eight specialists and a web search to be told hello. Dispatching the workforce at "hi" costs the owner minutes and thousands of tokens for a sentence.

- Do NOT re-run an agent that has already completed successfully unless its output was an error, or new information genuinely changes its inputs.

- Answer the question that was asked, and stop. Once the agents that were run can answer it, choose FINISH – do not add adjacent work the owner did not ask for. "Which product should I reorder first?" is answered by stock

sent to a real address and the shop is charged. The confirmation is

enforced here rather than only in the browser, so a stray click, a

replayed request or another client cannot book by accident. The first

call returns what is about to happen; only a call carrying `confirm`

actually books.

if not bool(body.get("confirm")):
